ThunderPOS for iPad updated

Several features have been added to the latest release of ThunderPOS for iPad, available now. First, we have added the ability to do rounding to the nearest nickel for cash transactions. This can be done either always favoring the customer, or simply going to the nearest nickel for the cash portion of the payment.

The exact change button on the cash screen will reflect this rounded amount. To set your rounding mode, you'll go through the thunderpos.net settings under register settings.

We've also added support for creating trade containers through the iPad register. You'll still need to fill them out through the website. A video going over this process in full is available [here](#).

To start a trade container, you'll go through the more menu, then select trade container from the list of options. Fill in a description of the trade container that will let you know what one it was, and the amount you want to give to the customer.

We have also added support for Stripe through the iPad register for credit card processing, alongside the existing integration through Global. For assistance signing up with credit card processing through Global, please let us know and we can get a representative to contact you. To sign up for Stripe, log in through thunderpos.net and follow the steps in the order supplies → Stripe Payments section.

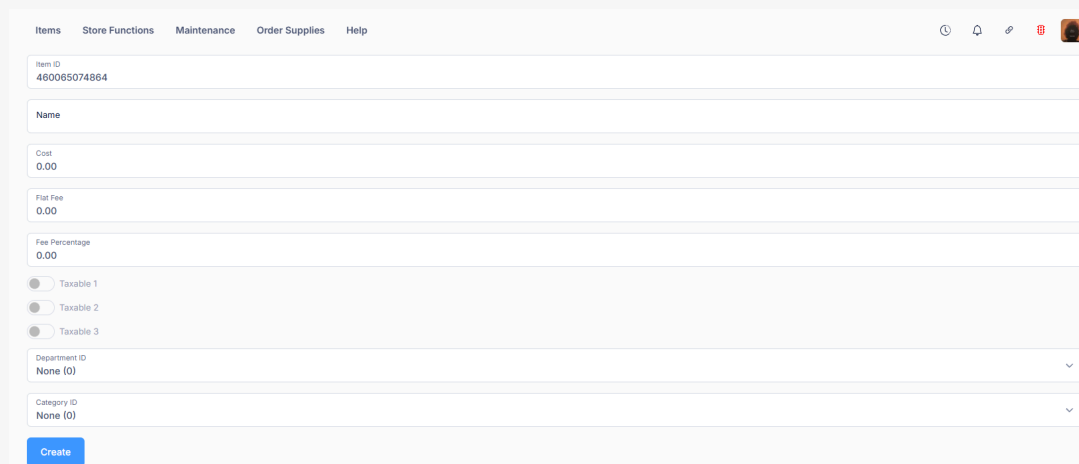

We have also added support for certain Epson printers through the iPad in addition to the previously compatible Star printers. For more

information, please contact sales.

Fees

We've had a few questions lately about adding a surcharge for credit card transactions, and wanted to go through our fees feature. While this does require the cashier to add the fee to the invoice in advance of checkout, it's very flexible and can add a percentage charge, a flat dollar amount, or a combination of both. Note that percentages will only be based on non-fee items if you have multiple fees on the same invoice.

To add a fee to the system, go through items → fees in thunderpos.net (or if using the windows version, go to store → fees) and click the green plus button.

The screenshot shows a web form for creating a fee. At the top, there are navigation links: 'Items', 'Store Functions', 'Maintenance', 'Order Supplies', and 'Help'. On the right side, there are icons for a clock, a bell, a pencil, a red square, and a user profile. The form fields are as follows:

- Item ID: 460065074864
- Name: (empty)
- Cost: 0.00
- Flat Fee: 0.00
- Fee Percentage: 0.00
- Taxable 1:
- Taxable 2:
- Taxable 3:
- Department ID: None (0)
- Category ID: None (0)
- Create: (blue button)

You can set up a normal item id and name, like any other item in the system, as well as tax options, cost, and category and department for reporting purposes. You'll also set two price fields - the flat fee, which will apply every time, and the fee percentage.

When a fee is on an invoice, if it has a percentage set it will constantly update as any item is changed on the invoice to apply that percentage charge.

To place a fee on an invoice, you can either have the browse fees button on your register and use that, or simply enter the item id as normal through the scan item box.

So, if you wanted to do a 3% surcharge, you could set the fee percentage to 3 and simply add it to the invoice when you know that a customer is going to use a credit card.

If you're interested in subscribing to the software, you can do so by contacting sales at (919) 387-7597 extension 100 or by subscribing through our [licensing website](#).

Active monthly subscriptions include support and software updates. Support may be reached at (919) 387-7597 extension 101, or via email at support@thunderpos.com.
